

Backup Confusion

Mis-understanding

- **Restore Points**
- **File Back-Ups**
- **Synchronisation**
- **Image Back-Ups**
- **Win-10 Rollback**

What is a Backup ?

- Copy of key data stored on a PC / Phone

Why have a copy ?

- In case data gets lost / destroyed
- If Sw Upgrade is 'unsatisfactory'
- If PC gets 'Infected' / 'Encrypted'
- To transfer data to a different PC / Phone
- Archival Storage - ATO 7 years

But how could I lose my Data ?

- Virus, Trojan, Malware, Encryption attack
- Storage Disk / Memory failure
- Problems ex newly installed program or OS
- PC damaged - lightning strike, brownout
- PC / Laptop stolen (left behind !)
- PC / House destroyed - fire, flood
- Malcontented staff - or family member
- Accidental deletion . . .

Two types of Data

- **Operating System & Applications**
- Re-Install from DVD or fresh Download
(may need backup doco re Install keys)
- **Personal Documents** - Email, Photos, Movies, Bookmarks, Preferences etc
- Can only recover from personal backups !
- Critical that multiple & **proven** copies exist of all key Personal Data
- NB. Within Personal Data, I even include all OS-Apps Build files

Backup Media

- Burn to CD (700MB) / DVD (4.5GB, 50c)
- Copy to USB Stick (16GB, \$12) - however, easily lost
- External HDD – USB3 (1TB-\$77, 2TB-\$129 @Officeworks)
- Network – Paid Remote Storage, eg. Carbonite us\$60 pa, unlimited space, includes auto Sync
- Free Cloud storage – Mozy 2GB, Google 15GB, Yahoo 1TB, MS OneDrive 5GB (1TB with O-365 subscription)
- Note : Most people have restricted Upload Speeds !!

Copy Types

- **Restore Point** – record system / program changes, so can easily revert / restore back
- **File Copy** – exact copy, as individual files
 - Incremental copy – only copy new or changed files
- **File Synchronisation** – mirror or two way update
- **Image Copy** – compressed copy of whole disk or partition
 - Incremental Image – only copy new or changed areas

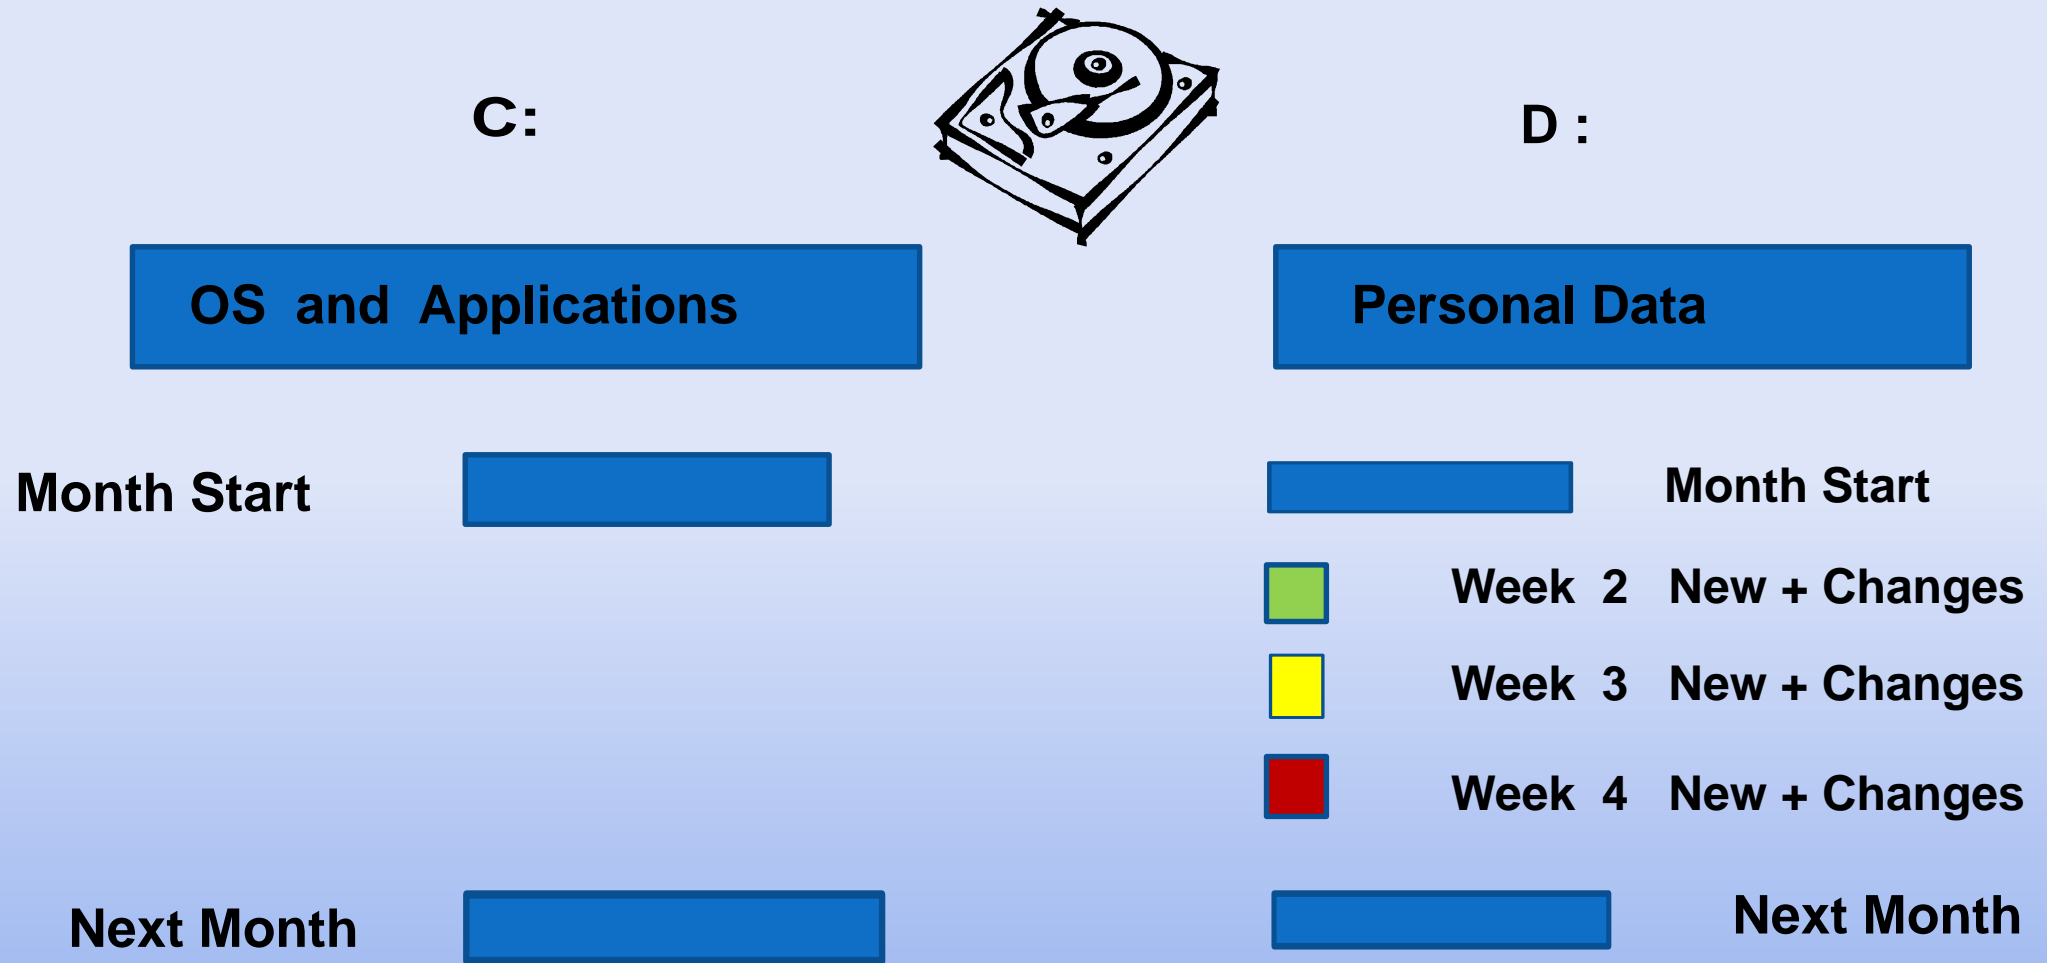

Full vs Incremental

To Restore : **Use Week 3 Backup**

Use 1+2+3 Backups

Backup Strategy : Split OS & Apps, Data

Or maybe, Weekly for C: (OS, Apps),

Daily for D: (Personal Data)

Copy Storage Locations

- Restore Points – data held within the PC
- Critical Data Copies stored Offsite
“more than a Mile, less than an Hour”
- Maybe Weekly Backups at Home
Monthly backups sent Offsite
Maybe Multiple Copies, Multiple sites
- Online Options - MS OneDrive 5GB free etc
also allows data sharing, multi-devices

System Restore Point

- Standard Windows Function (since XP)
- Automatically used with most Windows Updates
- May not include Drives other than C:
- Can invoke separately for Other changes
eg. Application Install, Dubious Email query
- **Roll-back to known Restore Point date/time**,
usually past 5 days, depending on space given

OK Cancel Apply

File Backups / Copies

- Standard Windows Function – File History in Win-8, 10
- Or added S/W (Acronis True Image)
- User Setup needed – to decide folders, frequency and backup locations
- Sometimes difficult to find – eg. Email files
- May have Incremental Options
ie. Only backup New / Changed files
- **Does not handle Boot-Sector / Registry faults**

Win 10 Backups

Win-7 Backup

(hidden in w8, w10)

File History - as in Win-8 / Win-10

The image shows a Windows File History window. The main window title is "File History" and the address bar shows the path: Control Panel > All Control Panel Items > File History. The left sidebar contains navigation options: Control Panel Home, Restore personal files, Select drive, Exclude folders, and Advanced settings. The main content area displays the file history for "Test.docx" located at "C:\Users\dave_\OneDrive\Documents 1\Test.docx". The history shows two versions: "V2 - Updated" (1055 bytes) and "V3 - Updated" (1112 bytes), both dated Wednesday, 30 March 2016. A smaller, overlapping window shows a more detailed view of the "V2 - Updated" version, including the file name "Test DOC - to demo File History" and the date "Wed 30 March".

File History Demo

File Synchronisation

- Maintain Up-to-Date copy of files on a second system (PC, USB Stick, DVD-RW, Ext HD)
- May be two-way, based on file time stamps (ie. Selects latest version of a file ?)
- Maybe be automated – esp. Cloud versions
- My Non-Cloud Preference: Free File Sync (www.freefilesync.org) or many more
- Has many synching options available

**Compare**

Image Backups

- Backup whole HD (or Partition), rather than files
- Considerably faster (1Gb / minute)
- Usually allows Full and Incremental Backups
- Can recover whole partition, including OS
- Standalone recovery – from CD or USB key (**setup prior !!**)
- Can recover to a different HD (if HD crashed)
- Can open as standard Directories to recover individual files . . .
- Preferred S/w: was Norton Ghost, Acronis TrueImage (us\$25)

now Macrium Reflect (free)

Macrium Reflect Free

Current Version: 6.1.1081 (7 February 2016)

An award winning disk cloning and imaging solution for free. Protect your personal documents, photos, music and e-mails. Upgrade your hard disk or try new operating systems in the safe knowledge that everything is securely saved in an easily recovered backup file. Macrium Reflect supports backup to local, network and USB drives as well as burning to all DVD formats. This version is for non-commercial home use.

We are pleased to announce that Macrium Reflect v6 Free Edition is available now. We have updated the user interface and added these exciting new features.

New Features in v6 Free:

Differential Images

Differential Images for faster backups and reduced storage space.

Auto verification

Automatically verify images after creation to ensure integrity.

Update & security

Windows Update

Windows Defender

Backup

Recovery

Activation

For developers

Windows Insider Program

Reset this PC

If your PC isn't running well, resetting it might help. This lets you choose to keep your files or remove them, then re-installs Windows.

Get started

Go back to an earlier build

If this build isn't working for you, try going back to an earlier one. When the next build is ready, we'll install it.

Get started

Advanced start-up

Start up from a device or disc (such as a USB drive or DVD), change Windows start-up settings or restore Windows from a system image. This will restart your PC.

Restart now

Win-10 Recovery

Update to Win-10
ex w7, w8 ...

Image held for 30?
days (20+ GB)

Scenario : deleted key family photo

... divorce looming

- Ensure Files backed up previously
- Access the backup to find specific photo
- Copy back to standard location
- Marriage saved . . .
- Also solves accidental Document deletion
- Note: could also extract ex Image Backup

Scenario : Installed Sw Update (or new program)

system now useless . . .

- Want to roll-back to pre-condition system
- - a) Ensure Restore Point available
 - b) Boot into Safe Mode (if needed)
 - c) System Restore to earlier point
- Standard part of XP upwards
 - May also handle Dubious Email, WebPage, now getting strange virus warnings

Scenario : Unsatisfactory Win-10 Upgrade

Two options . . .

- a) Windows Rollback – within 30 days . . .
Win-10 Upgrade saves copy of previous O/S
- b) Image Restore (ex Macrium or Acronis TrueImage)
 - From within Win-10 - if Win-10 partially working
 - or Standalone using Recovery CD or USB

Scenario: Disk Drive Noisy

system will not boot

- Apparent Disk Drive Failure, but have an external Image Backup available
- Obtain Replacement HDD and install
- Recover Whole System from Image Backups (30 - 60 minutes)
- NB. OS and Programs Reinstall + Data Restore might take 2 - 3 days

Scenario: Wildcat Bush Fire

house & contents all lost

- Get replacement PC via Insurance Money
- Reload OS & Apps
- Retrieve Off-site Data Backup
- Restore Personal Data
- Fully recovered: 3 – 4 hours

- Faster if both OS and Data Images Off-Site

Recommendation :

- Ensure Systems **Restore Point** taken before System Updates / New App installs
- **Segregate Data** from OS / Applications
eg: C= OS and Applications
D= Personal Data (docs,email etc)
- Use **external HDs** as backup medium
- Have **Image Backups** of C and D –
with an older Data Image stored Offsite

Summary

- Important to Understand differences
Restore Points and Rollback
File Backups or File Synch
Image Backups and Recovery
- Essential that Personal Data be backed
up regularly, with a copy Offsite
- **Back-Ups need to be tested**

Backup Confusion

Hopefully, we now better Understand :

- **Restore Points**
- **File Back-Ups**
- **Synchronisation**
- **Image Back-Ups**
- **Win-10 Rollback**
- **Any Questions . . .**
