

# SSD - What is it ?

**Solid State Drive**

Replacing (or in addition) to an HDD

**Hard Disk Drive**

**Where a PC stores all our data . . .**

# Physical Size Comparisons

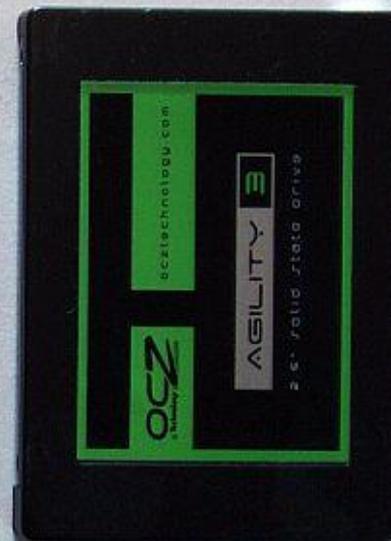

Standard 3.5"

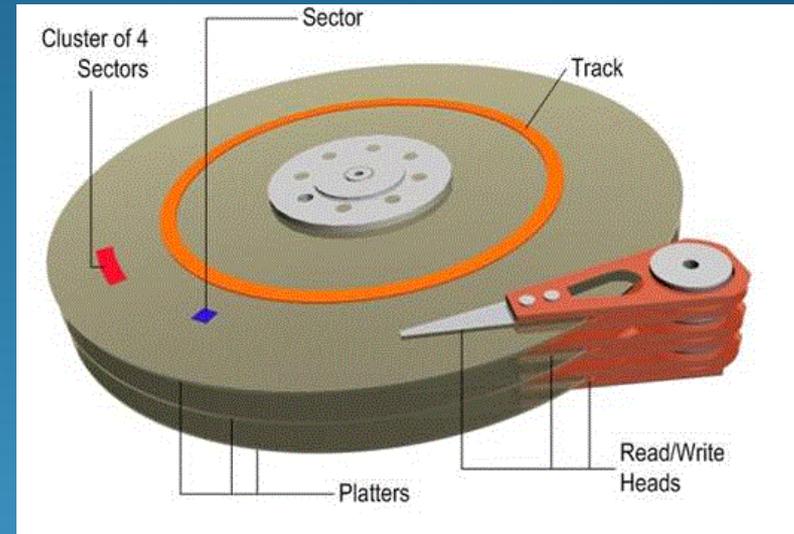

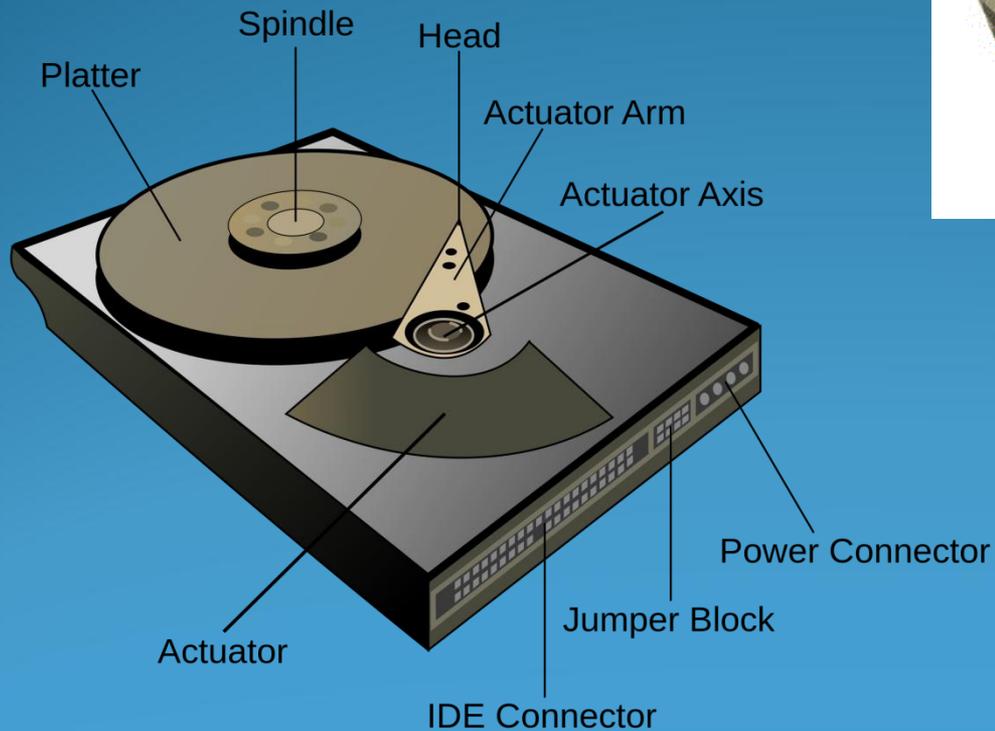

Laptop 2.5"

SSD 2.5"

# How does HDD work ?

# HDD vs SSD Differences

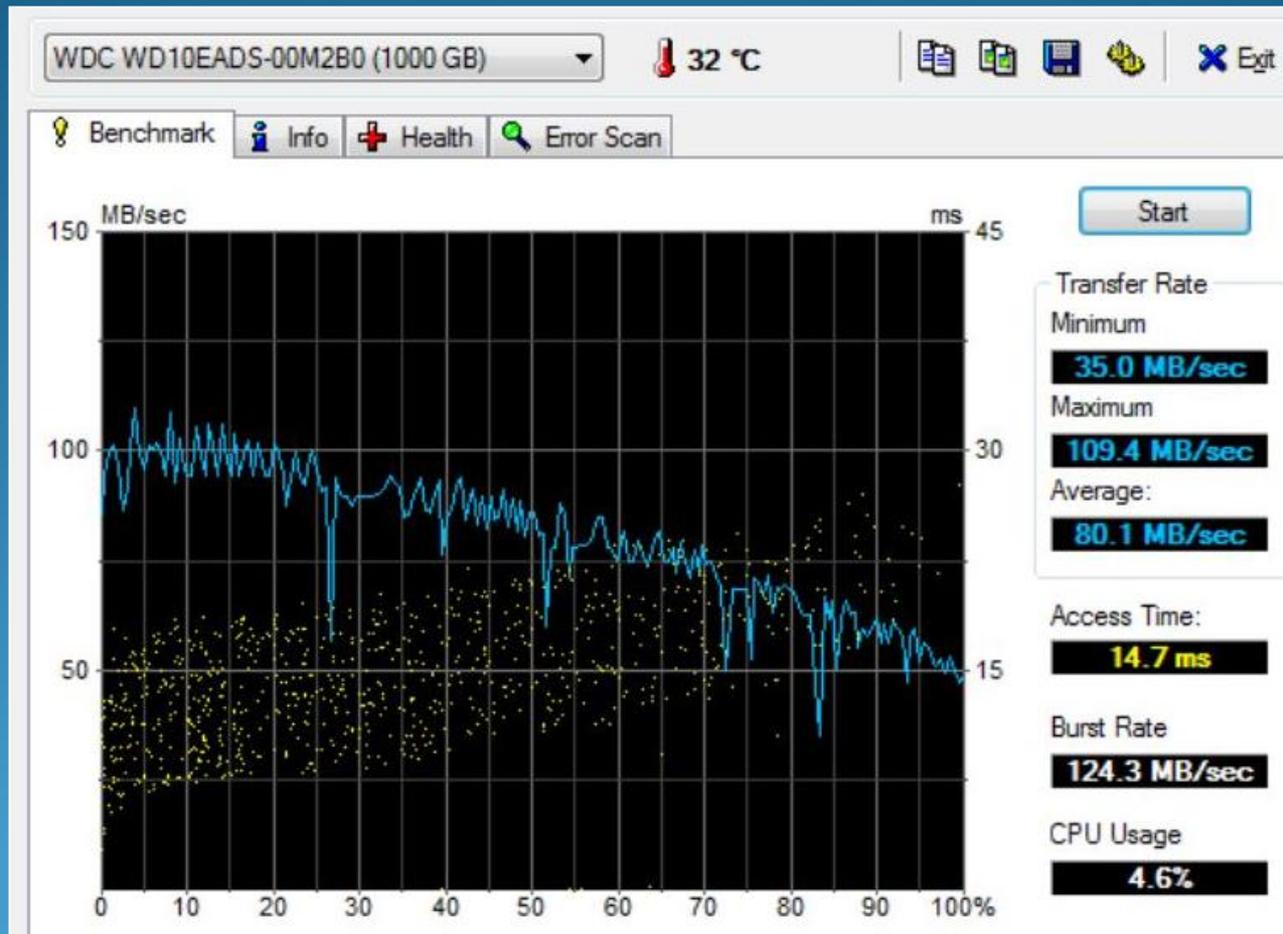

## Hard Disk Drive

- spins at High Speed (5400rpm, 7200rpm and above)
- info recorded in tracks (like an LP record)
- R/W head on arm moves across spinning surface (like an LP record)
- actually flies above the surface . . . Can move quickly track-to-track (positional delay – depends upon distance needed.. )
- needs to wait for data to be under the head, so it can be read / written (rotational delay – on average, half a revolution)
- Needs power -> heat, eventually “wears out” – head crash !!

## Solid State Disk

- like an oversized USB stick, no moving parts, uses far less power
- No positional or rotational delays – thus better performance
- May wear out (read/write process), 10 year life ???
- Cost/GB reducing, now reasonable - 250GB drive, \$120 (compared to \$120 buys 2TB 3.5” HDD)
- Either DIY, or maybe \$60 Labour in a PC Shop (after SSD Purchase)

# Measurement using HD-Tune S/w

Transfer 100->50 MB/sec, Access 14.7 ms

# Comparison for SSD

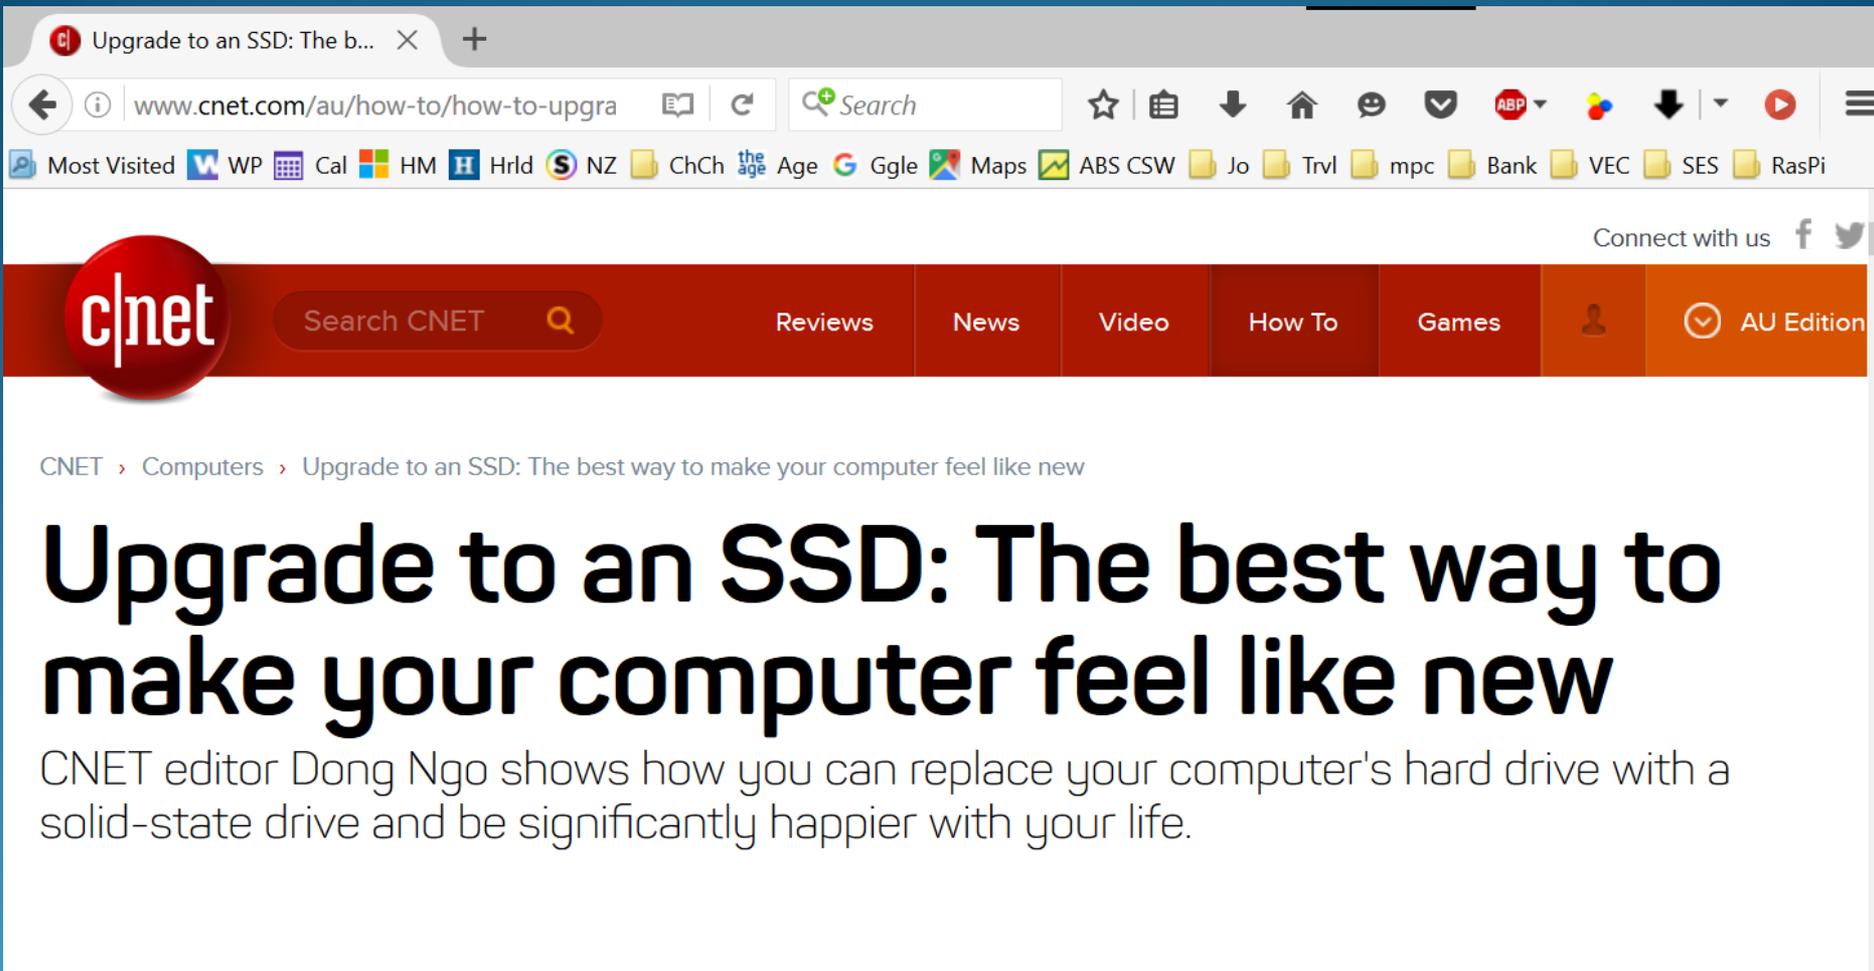

**HDD - Transfer 100->50 MB/s, Access 14.7 ms,**

**SSD - Transfer 200 MB/s flat, Access 0.1 ms**

# Device Performance Comparison

<b>Device</b>	<b>Size</b>	<b>Av Xfer MB/sec</b>	<b>Access Time millisecs</b>
<b>USB-Flash</b>	<b>8 G</b>	<b>19</b>	<b>0.6</b>
<b>USB-External HD</b>	<b>2 T</b>	<b>33</b>	<b>15.7</b>
<b>Laptop 2.5" HD</b>	<b>160 G</b>	<b>35</b>	<b>17.5</b>
<b>PC 3.5" Sata HD</b>	<b>1 T</b>	<b>80</b>	<b>14.6</b>
<b>PC 3.5" eSata HD</b>	<b>1 T</b>	<b>87</b>	<b>15.3</b>
<b>SSD external eSata</b>	<b>60 G</b>	<b>110</b>	<b>0.1</b>
<b>SSD Internal Sata</b>	<b>60 G</b>	<b>200</b>	<b>0.1</b>
<b>RAM-Drive</b>	<b>750 M</b>	<b>2,110</b>	<b>0</b>

<http://www.cnet.com/au/how-to/how-to-upgrade-ssd-windows-10/>

# Installation Process

- Attach SSD to existing PC
  - for laptop, may need a USB external dock
- Clone HDD to SSD (if about same size)
  - else Recover OS Partition to SSD
- Swap SSD for HDD (or change Boot Sequence)
  - may need to update MBR, using Win DVD Repair
- Enjoy far better performance . . .
