

I would first like to thank those that have given me the encouragement and support to apply for a position representing the members and interests of this club, and the opportunity to work towards its growth and prosperity into the future.

I am a sound engineer by trade, and operate a location-recording business which gives me ample opportunity to exercise my true passion; creative technical problem solving and design.

I try to approach all aspects of my life with a set of core philosophies, chiefly the view that every problem has a solution, and that it's simply a matter of finding it. Another key philosophy is that good consistent outcomes emerge from good process. Leaders frequently take a 'top down' approach in an attempt to force a system to fit their ideology, but this doesn't reflect the true nature of systems. Outcomes grow from the conditions in which they are sown.

I see the club as having great potential to build on its prominent heritage, to expand its reach to an even broader cross-section of the community, and to grow as a hub of creative and technical discourse.

I look forward to the opportunity of serving this community.
