

I have come from a background of nursing and horticulture. Some may know me from my talk on dicots and mono-cots. From being a newbie I have worked within the Sci/Tech SIG to bring up our next major project, a mobile hydroponics unit. I enjoy working with people to bring ideas to practical outcomes. I listen and consult with people regardless what differences of ideas they have. I believe the club has a great community which I want to help prosper and thrive.

David has excellent ideals backed by years of experience and is a big kid at heart.

Stephen who has proven himself an excellent vice-president with fierce determination and not afraid to hear new ideas even if different from his own.

Flynn is a talented trades person who brings with him experience with the physical side of things and is wise beyond his years.

Aavon who is level-headed and understands much of the business and commercial aspects of this club.

Hugh with his quiet determination has renewed our club's social accounts and continues to do a fine of job keeping it going.

Dave who runs his own business and is never short of new ideas and perspectives.
