

# President's written report to AGM Feb 2021

2020 will of course always be remembered as the year of Covid 19. We are fortunate that in Australia the effects of the pandemic have been very much less harmful than in many other countries. Nevertheless, it has had an effect on us all, and on our club.

Despite the challenges and potential risk to the club, I am happy to say the negative consequences have been much less damaging than I feared this time last year. Whether that is a result of good judgement or good luck, I'll leave for you to decide.

Overall the club is in pretty good shape, certainly financially. We have roughly \$500,000 in the bank, and own our own premises worth, probably, a shade under \$1M (I'm discounting a bit due to Covid). We have very close to 1,500 members. We are currently losing about 100 members per annum, largely as a reflection of our ageing membership. There are however signs that the rate of loss is easing off, though we don't have enough historic data to base a very meaningful analysis on.

Some of the notable features or events of the year were, in club terms:

- We managed to maintain SIG meetings and monthly meetings using ZOOM and the like. It was a bit of a rocky start, but we did find a path that worked in most cases. Well done everyone who helped make that happen;
- Running meetings on ZOOM enabled us to have guests and speakers in distant places. So we had high profile speakers from interstate. In the Microcontroller SIG we even had a guest presenter from Bangladesh;
- While there has been some loss in membership, it's been no more than normal attrition due to our ageing demographics. We even acquired a few new members;
- There was a big surge in iHelp cases early in the pandemic, as members moved more to online pursuits;
- The Coder DoJo continued in an online format. This is a program that introduces children from 7 up to programming. It is run by volunteers from inside and outside the club, in effect sponsored by Melb PC as a community service. Thank you all;
- The project to revitalise the Moorabbin club rooms has continued, albeit at a much slower rate. The former training room is now the Maker Room. It is not complete, and will hopefully continue to evolve and morph with the times. At the moment it is set up with a well equipped electronics work space for those interested in Arduino, Raspberry Pi and related electronics projects.

The lounge area is in the process of being transformed into a much more comfortable, friendly space, where members can hang out, have a coffee, socialise, watch the footy, and play games.

With a donation of a collection of vintage home computer equipment we have started a "museum" project.

Kudos to all those member volunteers who have rolled up their shirt sleeves, donned their masks, and worked the tools;

- As I write this a number SIGs that I know of are experimenting with hybrid meetings, where people can attend in person or remotely. I believe that could be a very significant shift in how we function, even (or especially) after the Covid crisis. It will make more SIGs accessible to more members who might be constrained by distance. Remember: *Every*

*member is entitled to attend every SIG meeting, whether formally “registered” for a SIG or not.*

If any SIG feels they need some extra resources to implement hybrid meetings, please let me know. I am very much in favour of supporting such initiatives.

- Then the big one: The transition of our email system to Google.

This is a huge project that had to be undertaken to protect us from capricious policy changes by our former email host. It has been a much more involved and drawn out process than we anticipated. But to paraphrase John F. Kennedy: We choose to switch to Google in this year, not because it is easy, but because it has to be done.

Many people have contributed time, energy and dedication to the club’s operations. I can’t know everyone, let alone mention them all. But some of the people I have worked most closely with come to mind:

Kirsten Greed has stepped up to the task of organising the monthly meetings, not only relieving me of the task but also bringing her own style to the events.

Stephen Zuluaga has driven the process of transforming and upgrading the club rooms as well as making a major contribution to the email migration.

John Swale, member number 16 and our Secretary. John is one of the people who has kept the club on track with both statutory and operational matters. He has also provided me with invaluable support in the formalities of running committee meetings, something for which I am not really cut out. John decided not to nominate for the Secretary position again this year, and as I write this the position remains unfilled.

Hugh Macdonald has made a substantial front line contribution to the hard work of the email transition, as well as ably editing PC Update.

Rob Brown has been active in a number of areas: The email transition, facility maintenance, and liaison with our CiviCRM support contractor

Harry Lewis makes invaluable contributions in iHelp, CiviCRM, and the email transition. He is also the go-to guy for hard data and statistics on club matters.

Peter McConnachie, our treasurer, who has minded the club finances in a difficult year.

The whole iHelp team: Dave Simpson (Convener), Leighton West (Secretary), Bert Alesich, Mike Allison, Kevin Dempster, Stewart Gruneklee, Harry Lewis, and Cedric Wyndham. This dedicated ban of volunteers helped out one third of the membership during 2020, with total of 1,345 requests for computer help. It just shows how important iHelp still is to many members.

Our club has, of course, a large number of Special Interest Groups, or SIGs. Those SIGs provide information, assistance, socialisation and sharing of common interests across many topics and suburbs. They are held together by their individual conveners, to whom we all owe a debt of gratitude, but who are too many to mention individually. But you know who you are, and thank you.

And last but not least Malin Robertsson, the ever obliging lady who runs the office. And office volunteers Steph Lancaster, Bill Moss, and Stewart Gruneklee.

A big thank you to all I have mentioned and those I have inadvertently missed.
